We teach, research and work with an international and interdisciplinary approach.

About AWARE

International research networks and interdisciplinary cooperation have become essential in developing the key technologies of tomorrow. Since 2010, Technische Hochschule Ingolstadt (THI) has established a strong strategic network (Applied NetWork on Automotive Research and Education) with the Federal Universities of Santa Catarina and Paraná as well as additional industry and research partners. This provided the basis for the AWARE Center, opened in 2020. As a highly application and technology-oriented Center, we provide our services to a community of academic and industrial partners based in Bavaria and Latin America in order to enable them to join forces in finding new answers to global challenges.

Values and Principles
